# DSP module

Model: uHost-BF2

Features

- High Performance DSP Blackfin ADSP-BF533 from Analog Devices, Inc.
- Cyclone EP1C6T144I7 FPGA for customer projects
- Microchip PIC18F24 for power good monitoring and HASP customer options
- All interfaces of Blackfin DSP and FPGA are combined into one 100 pin connector
- Industrial temperature range (-40 °C...+85 °C)

Description

Digital signal processing (DSP) module is optimized for sensors data acquisition and processing.

Cyclone family Altera FPGA from Intel Corp. provides flexible and scalable solution for customer applications.

The module allows updating user software, FPGA projects and other sectors of Flash-ROM in them without opening the device cover via RS-422 serial port with the help of the corresponding service PC software.

Block diagram
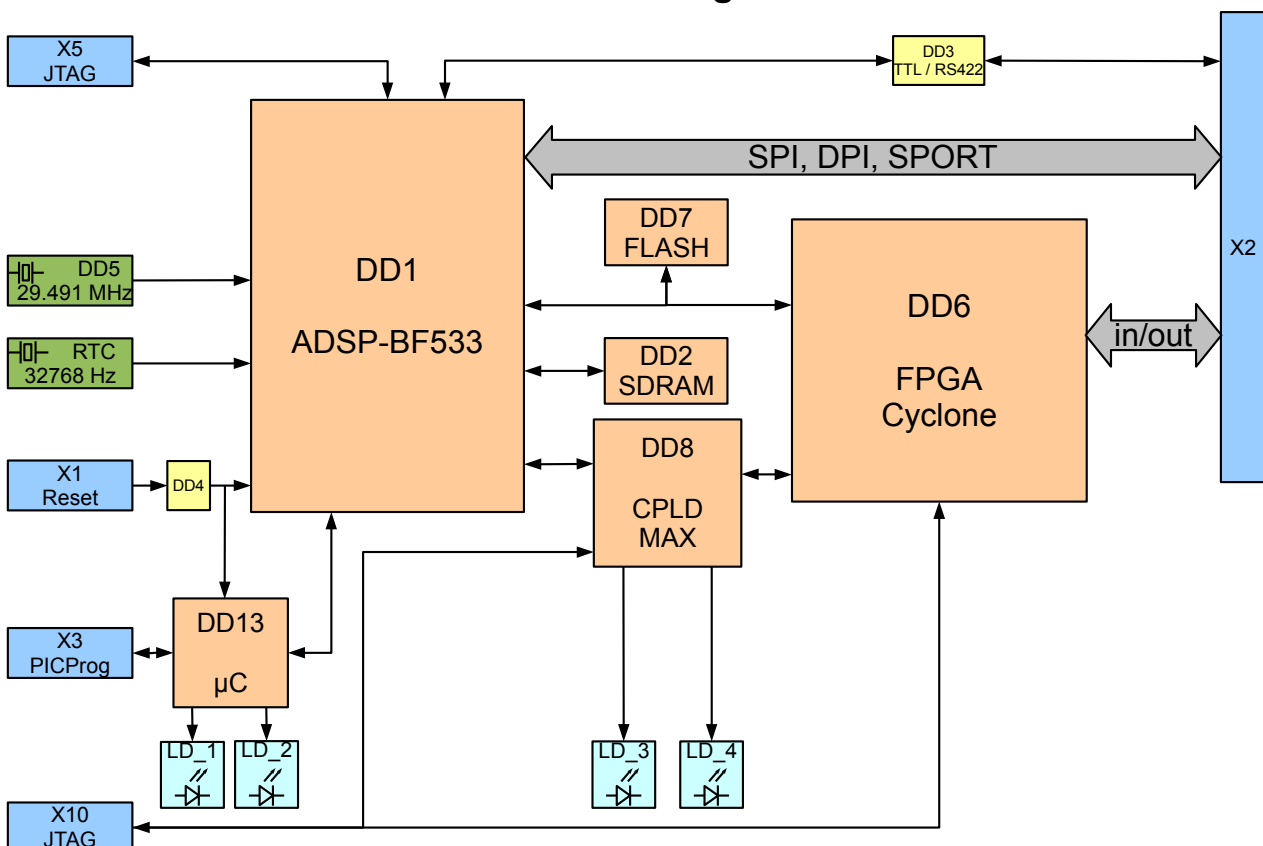

Specification

System	
CPU	DSP Analog Devices Blackfin ADSP-BF533 @ 470 MHz
RAM	32 Mbytes SDRAM @ 117 MHz
Flash ROM	4 Mbytes
FPGA	Altera FPGA Cyclone EP1C6T144I7 from Intel Corp.
JTAG	Analog Devices JTAG connector (not soldered), Altera FPGA JTAG connector for debugging, diagnostics and manufacturing
RTC	With pins for external battery in 100 pin connector
Microchip PIC	PIC18F24 for power good monitoring and HASP options
Interfaces	
Blackfin on-chip UART, RS-422	For servicing (user software, FPGA project update) and debugging
SPI	1 interface with 4 chip selects, can be program as GPIO pins, 100 pin connector
PPI	1 interface with 8 bit data bus, can be program as GPIO pins, 100 pin connector
SPORT	Dual-channel synchronous serial port, 1 interface, 100 pin connector
Expansion connector	For optional interfaces to FPGA, 53 GPIO in 100 pin connector
LEDs	2 user LEDs
Power, environmental and mechanical	
Power Supply	+5 V, 120... 330 mA (depends on SDRAM and FPGA usage)
Temp. range	-40 °C...+85 °C
Dimensions	80 mm x 48 mm x 8 mm

Versions of delivery

1. uClinux OS:
   - u-boot boot loader;
   - uClinux drivers support for module devices;
   - demonstration FPGA project written into Flash ROM (with source code).

2. Non-OS:
   - boot loader written into Flash ROM;
   - demonstration FPGA project written into Flash ROM (with source code);
   - PC software under Microsoft Windows for flashing user software and FPGA project via serial RS-422 interface;
   - Blackfin software examples with source code.
